

Prevents frost damage to fountains & birdbaths

Fountain Frost-Free™

Safe for birds, wildlife, fish, children & pets

If water freezes in a fountain or bird bath, it can expand and crack the resin or stonework. Fountain Frost-Free prevents frost damage to fountains & birdbaths and allows continued access to drinking water for wild birds.

Fountain Frost-Free is a safe, environmentally-friendly way to protect your water feature, bird bath, pond and pump from freezing.

HOW TO USE FOUNTAIN FROST-FREE:

1. Shake the bottle and remove the childproof cap.
2. Squeeze the bottle gently to fill measuring chamber.
3. Add 20ml per gallon (4.5 litres) to the reservoir or bird bath. Double dose for really cold weather conditions.
4. It is safe to repeat the treatment after 7 days.

Water features often do not hold a great deal of water. As a guide, to calculate the water volume remember that a bucket holds approx 13.6 litres (3 gallons).

Ambienté Recommends:

'Fountain Safe' will help you to effortlessly maintain the lustre of your shiny new water feature whilst ensuring that the safety of your children and pets is not compromised.
